

CLAIMS

1. A vehicle towing attachment which is to be inserted into a lower portion of a vehicle to be towed and raises and
5 holds wheels when the vehicle is towed, the attachment comprising:

three prongs for retaining a plate spring having the wheel attached thereon.

2. The vehicle towing attachment according to claim 1, wherein a first prong of the three prongs retains a longitudinal
10 end of the plate spring, and second and third prongs retain sides of the plate spring.

3. The vehicle towing attachment according to claim 2, wherein the attachment is constituted by cementing together a first plate having the first prong formed thereon and a second
15 plate having the second and third prongs formed thereon.
